

Sync domains in a hosting environment automatically

Use Case:

If you are a hoster you probably want to synchronize available domains with nimbusec automatically.

Tools to use:

- nimbusec sync-domains script
- nimbusec create-agent-configuration script

Steps:

- Download the nimbusec agent from the nimbusec portal
<https://portal.nimbusec.com/einstellungen/serveragent>
- Download and build the hoster-tools scripts from nimbusecs Github account
<https://github.com/cumulodev/hoster-tools>
- Create a script which fetches all available active domains of a server
- Create a script that combines the process of
 - fetching all active domains (your script)
 - create nimbusec agent configuration, and save it to the right place (nimbusec create-agent-configuration script)
 - sync domains by adding new ones, delete removed/inactive (nimbusec sync-domains script)
 - log differences
